### **2.1 Description of Services:**

The proposer shall provide Subsurface Utility Engineering (SUE) services when directed by the District for the location of underground utilities using applicable locator equipment as delineated below. Surface location marking shall utilize standardized utility color codes. SUE services may also require excavation (SUE-A) to determine the depth of bury and identification of the utility type, conduit material, and size/diameter.

Service will also require the location and marking of encased utility lines, piping, and reinforcing steel within concrete structures for planned penetrations of existing structures using applicable locator equipment and appropriate marking of the encased utilities and/or reinforcement on the concrete work surface.

- ii. Utilities shall be located and marked within 72 hours of notification to support excavations and penetration activities. When emergency conditions require, utilities shall be located and marked within 2 hours of notification in order to support ongoing construction excavations and/or concrete structure penetration activities.

- iii. If subsurface utilities cannot be identified using SUE locator equipment, The proposer shall utilize record as-built drawings and other relevant documents provided by the District and mark the utilities as indicated on the drawings provided.
- iv. The proposer will utilize any or all of the following equipment on a case-by-case basis as necessary in order to provide Utility Quality Level A and B location service as defined in ASCE Standard CI/ASCE 38-02 "Standard Guideline for the Collection and Depiction of Existing Subsurface Utility Data":

- v. The proposer shall provide written documentation to the District of the location work required by completing "Subsurface Investigation Situational Awareness Checklist" to help guard against unknowns and potential pass-through utilities.

The proposer shall be responsible for ensuring equipment is in proper working order and calibrated per manufacturer's recommendations. Proposer will note any discrepancies on provided excavation or penetration drawings and submit to Mechanical Utilities. A discrepancy shall be defined as a material difference between the reference drawings and findings in the field; reference drawings shall be "redlined" to clearly indicate differences between field verified utility locations and locations indicated on record drawings.

Should an "unknown" utility be found with location equipment but not indicated on the record drawings, the unknown utility shall be marked in a bright color and the District shall be notified. The proposer shall remain on call until the District has reviewed the marked field location of the unknown utility.

The District may also provide GPS coordinates when requested, i.e., configuration changes to be incorporated into mapping. The proposer will be provided applicable permit documents accompanied by record drawings of known utilities. The proposer shall promptly verify known utility location information found on provided record drawings. For permit exclusions, the proposer will mark areas with field equipment. Permit
